Art Unit: 3662

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-5, 55 are rejected under 35 U.S.C. 102(b) as being anticipated by Webber (Pat. No. 4,144, 571) or Latham et al (Pat. No. 3,975,731).

Webber teaches a method for refining a gee-location estimate of a wireless transmitter emitting a signal that is received by a predetermined number of sensors that is greater than the minimum number of sensors required to obtain the geo-location estimate, wherein signals from the sensors used to estimate the location contain a bias error, the improvement comprising updating the gee-location estimate by recursive analysis of the bias error to thereby refine the gee-location estimate (Fig. 3-5; col 3, lines 4-22; col 7, lines 3-14; col 8, lines 4-col 9, line 49).

With regard to claim 55, Webber teaches a method for identifying bias measurements in a geo-location estimate of a wireless transmitter emitting a signal that is received by a predetermined number of sensors that is greater than the minimum number of sensors required to obtain the geo-location estimate, wherein measurements from the sensors used to estimate the location contain a bias error, the improvement comprising updating the geo-location estimate by recursive analysis of the bias error to thereby identify bias measurements (Fig. 3-5; col 3, lines 4-22; col 7, lines 3-14; col 8, lines 4-col 9, line 49).

Art Unit: 3662

Latham et al teach a method for refining a gee-location estimate of a wireless transmitter emitting a signal that is received by a predetermined number of sensors that is greater than the minimum number of sensors required to obtain the geo-location estimate, wherein signals from the sensors used to estimate the location contain a bias error, the improvement comprising updating the gee-location estimate by recursive analysis of the bias error to thereby refine the gee-location estimate (fig. 4; col 4, line 53-col 8, line 25).

With regard to claim 55, Latham et al teach a method for identifying bias measurements in a geo-location estimate of a wireless transmitter emitting a signal that is received by a predetermined number of sensors that is greater than the minimum number of sensors required to obtain the geo-location estimate, wherein measurements from the sensors used to estimate the location contain a bias error, the improvement comprising updating the geo-location estimate by recursive analysis of the bias error to thereby identify bias measurements (fig. 4; col 4, line 53-col 8, line 25).

- 3. Claims 6-54, 56-57 are allowed.
- 4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- 5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dao L. Phan whose telephone number is (571)272-6976. The examiner can normally be reached on M-F 9:00-5:30.

Application/Control Number: 10/531,044 Page 4

Art Unit: 3662

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Tarcza can be reached on (571)272-6979. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

6. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
